Fund Overview

The Fund is a conviction driven long-only portfolio of Global companies that normally has between 35-55 stocks.

The Fund follows a bottom up process focussing on quality and value. The Fund exploits market inefficiency by investing for the long-term in underappreciated companies. By applying a demanding and consistent screening and valuation process we ensure only those businesses with the best long-term potential are selected for the portfolio. We believe that price matters most; buying these companies at the right price – below their intrinsic worth – will produce investment outperformance over time.

The portfolio invests primarily in transferable securities and is structured by employing a strict cash flow based valuation criteria, focussing on the medium to long-term horizon. Equity investments consist predominantly (75% or greater) of listed companies in high-income economies (as defined by the World Bank from time to time) but is not limited to this subset of the investment universe.
